General Information

- HYDRO-WET PELLETS are designed to supplement regular applications of Hydro-Wet Injectable turf wetting agent in reducing the incidence of dry spot on turfgrass.
- HYDRO-WET PELLETS reduce the surface tension of water and aid infiltration into hydrophobic soils.
- One HYDRO-WET PELLETT will provide approximately 30 minutes of treatment.

Directions For Use

Golf Course Greens, Tees and Fine Turf: Using available commercial in-line hose applicators, remove the plastic lid, insert the HYDRO-WET PELLETT and the plastic jar into the reservoir of the hose-end applicator with the opening of the jar containing the pellet facing toward the flow of water. Secure the reservoir to the applicator and begin application. Inserting the jar with the pellet facing away from the water flow will slow the rate of erosion of the pellet thereby reducing the amount of wetting agent dispersed over time. This is an acceptable option for minimizing wetting agent use. Thoroughly clean applicator after use.

Use Rates: To prevent the occurrence of localized dry spots, begin applications at least one month prior to moisture stress. Place one HYDRO-WET PELLETT into an applicator. Apply 2 to 4 minutes per 1,000 sq. feet (100 sq. meters) of turfgrass. Treat weekly or as needed. For in-season problems with localized dry spots, extend the application time to 4 to 8 minutes.
